

Day 3 → Chapter 4: React Hooks & Dynamic UI

- **useEffect** → Show a message when component mounts (e.g., "Student list loaded").
- **Conditional Rendering** → Show “No students yet” if list is empty.
- **Lists & Keys** → Render multiple students using `.map()`.
- **Forms in React** → Create `AddStudentForm` component (but don't hook it up yet).
- **Event Handling** → Handle input changes with `onChange`.

Output Day 3: **Dynamic Student List + Form UI built.**
