Day 4 → Chapter 5 & 6: APIs + Routing

- **API & JSON** → Instead of local JSON, fetch a mock student list from `jsonplaceholder.typicode.com/users`.
- **Loading & Error States** → Show "Loading…" or "Error loading students".
- **Routing** → Add React Router:
  - `/students` → Student list
  - `/students/:id` → Student details
  - `/add-student` → Add student form

Output Day 4: **Students load from API**, and **routing works**.
